Times New Roman 12

Prof Cronje en Kotze,

Dankie vir die waardevolle sessie wat ons gister deurgewerk het. Ek sal die nuwe idees deur trek na my navorsingsvoorstel.

Prof Cronje, ek wil net terugvoer gee oor u stellings van navorsingsmetodes. Ons in die rekenaarwetenskap doen nie navorsingsmetodes nie. Dit is nie standaard nie of praktyk nie. Ek kan dus glad nie sien hoekom dit nodig is dat ek dit gebruik in my navorsing nie. U is egter die studieleier en ek respekteer u sienings, en sal dus gaan oplees daaroor.

Vriendelike groete,
Alta

Liewe Alta

Dankie vir die dokument sal vanaand daarna kyk.
Groete
Johannes

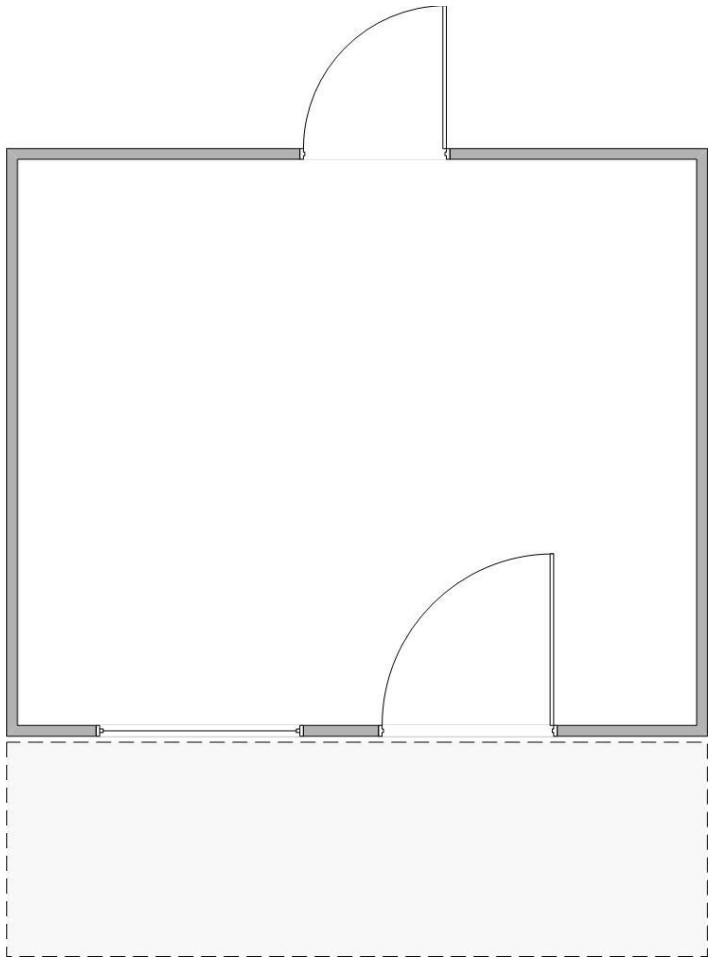
Research Design

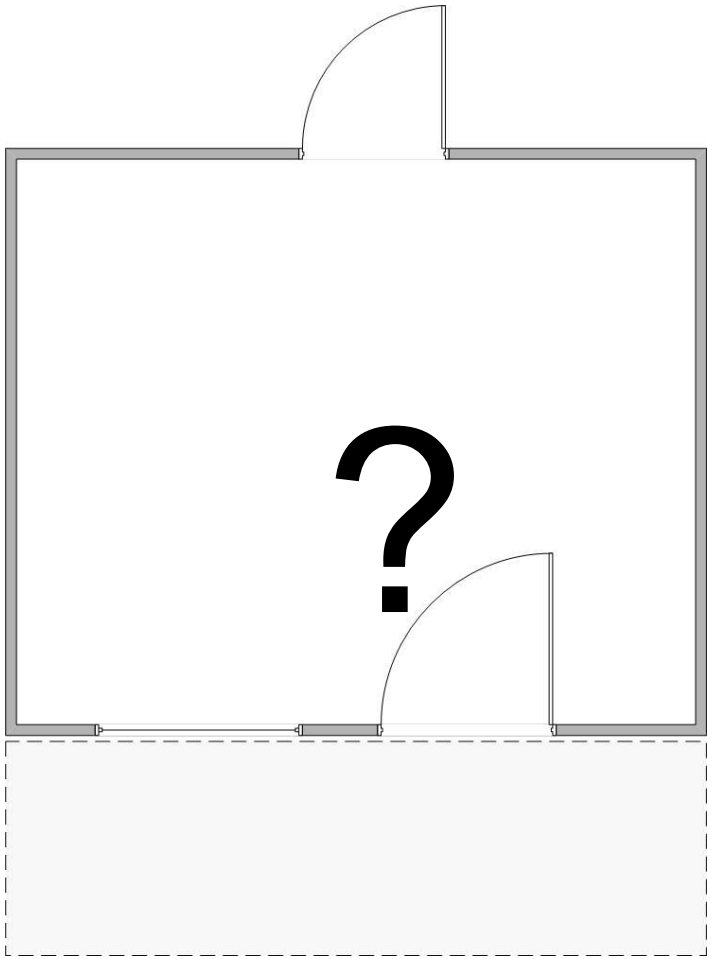
- How lo[illegible] g house?

Research Design

What does the design looks like?



Research Design



On describing complex objects

John Zachman

If you want to create a complex object you have to be able to describe it.

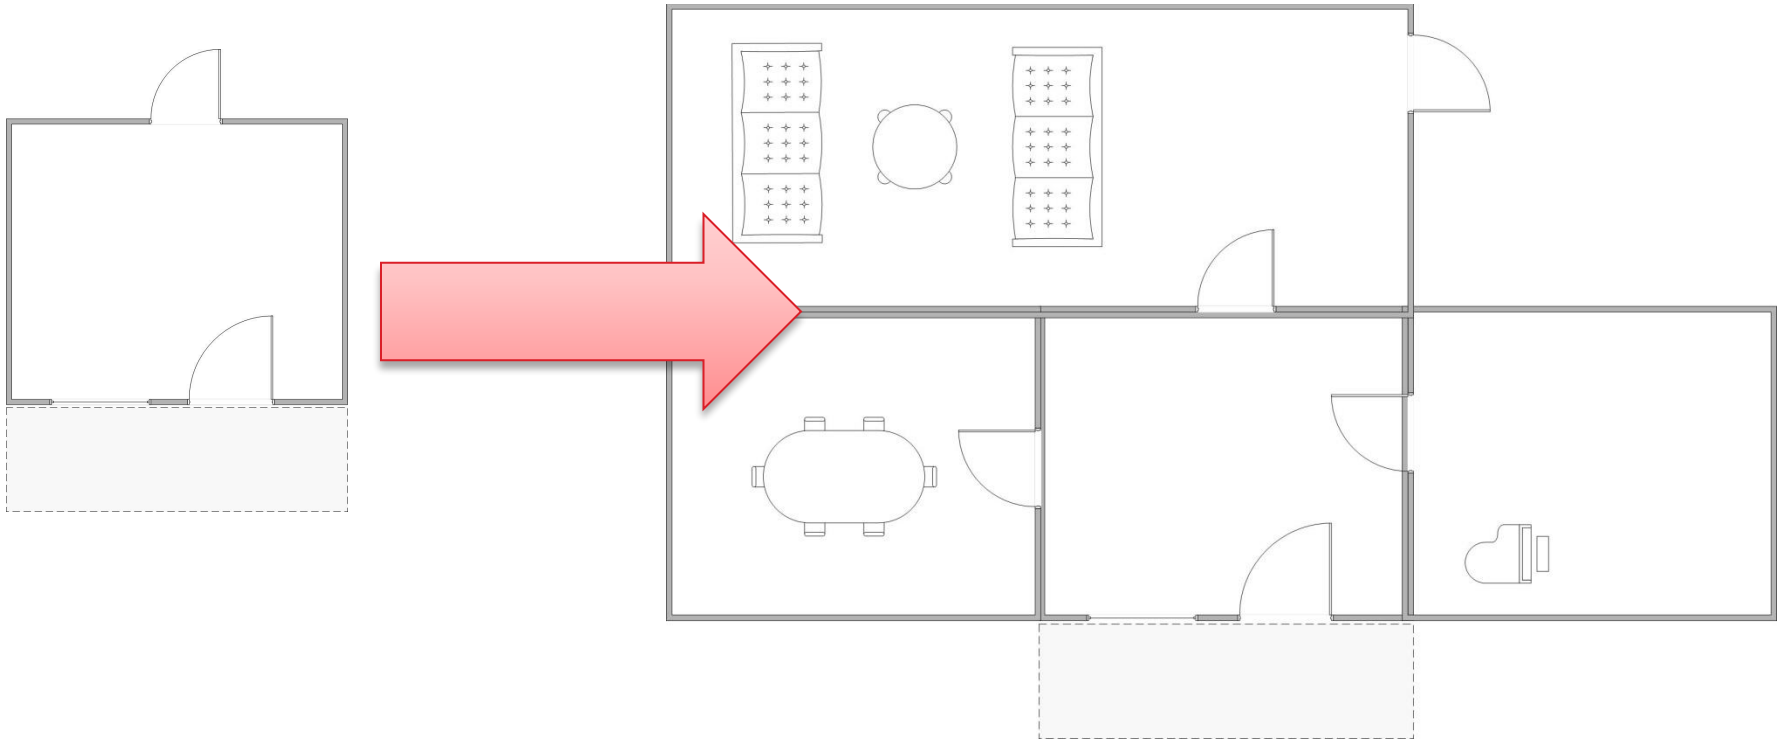
If you can’t describe it, you can’t create it.

If you want to change what you create, you have to have the descriptive representations in order to do so.

If you don’t, you may be able to change it, but it may involve risks and you may do the wrong thing, plus lose what you created entirely.

The whole idea of architecture comprises two things: one for creating a complex object and one for change.

Why do we need a plan?



Research Design

- You need a clear plan describing WHAT you are going to do, WHY it is necessary to do it, HOW you are going to do it, what you are NOT going to do.

Type of research ..

- Explore
- Understand
- Solution
- Describe

What are you doing?

- There are exploratory studies that explore the possibilities of new technologies, or that try and discover who's doing what, and why (EXPLORE)
- There are studies that attempt to understand what solutions work best, and why (UNDERSTAND)
- There are studies that try to determine why a certain problem exists and then figure out how best to develop a solution (SOLUTION)
- There are studies that evaluate a given situation in order to describe what is going on, and how it can be represented, copied or scaled up (DESCRIBE).

Score Over 60: Charismatic and Engaging

1. **Score Over 60: Charismatic and Engaging**
   - **Description**: Highly charismatic individuals who are engaging, persuasive, and have excellent interpersonal skills.
   - **Ideal Data Collection Techniques**:
     - **Interviews**: Their charm and engaging nature can help in creating a comfortable environment for in-depth interviews.
     - **Focus Groups**: Their ability to engage others can facilitate dynamic and productive group discussions.
     - **Field Observations**: They can easily adapt to various environments and contexts, making them suitable for observations in different settings.

2. **Score 51-60: Confident and Articulate**
   - **Description:** Confident individuals who are articulate and able to clearly express their thoughts and ideas.
   - **Ideal Data Collection Techniques:**
     - **Surveys:** Their confidence can help in effectively designing and distributing surveys with clear instructions.
     - **Interviews:** Their articulation skills make them well-suited for conducting structured or semi-structured interviews.
     - **Online Data Collection:** Their comfort with technology and clear communication can aid in gathering data through online platforms.

3. Score 41-50: Charming and Persuasive
    - **Description:** Charming individuals who can persuade others and build rapport easily.
    - **Ideal Data Collection Techniques:**
        - **Focus Groups:** Their charm helps in managing group dynamics and encouraging participation from all members.
        - **Interviews:** They can use their persuasive skills to gain deeper insights from interviewees.
        - **Ethnographic Studies:** Their ability to connect with people can be useful in immersive and observational studies.

4. **Score 31-40: Analytical and Detail-Oriented**
    - **Description:** Analytical individuals who are detail-oriented and focused on precision and accuracy.
    - **Ideal Data Collection Techniques:**
        - **Surveys:** Their attention to detail can help in designing comprehensive and precise survey questions.
        - **Case Studies:** Their analytical skills are beneficial in conducting thorough case studies and analyzing detailed data.
        - **Quantitative Data Collection:** They are adept at handling and analyzing quantitative data, making them suitable for large-scale surveys and experiments.

5. **Score 21-30: Reflective and Thoughtful**
    - **Description**: Reflective individuals who are thoughtful and considerate in their approach.
    - **Ideal Data Collection Techniques:**
        - **In-Depth Interviews**: Their reflective nature is ideal for conducting thorough and thoughtful interviews.
        - **Qualitative Research**: They excel in qualitative data collection methods, such as narrative analysis or in-depth case studies.
        - **Journals and Diaries**: Their thoughtful approach can be well-suited for analyzing personal journals and diaries.

6. **Score Below 21: Reserved and Cautious**
    - **Description**: Reserved individuals who are cautious and may prefer structured environments.
    - **Ideal Data Collection Techniques**:
        - **Structured Surveys**: They may prefer the anonymity and structure of surveys, which allow for careful and considered responses.
        - **Document Analysis**: Their reserved nature can be suited for analyzing existing documents and secondary data.
        - **Controlled Experiments**: They may excel in conducting controlled experiments where processes and interactions are well-defined.
